Philip and Bob,

Regarding TCEQ's review of the Draft Mixing Zone Evaluation Work Plan, please see the attached IOM from Chuck Stone, our assigned technical specialist. There may be some areas where some clarity may be provided by Bob and/or Anchor, and they may do that directly with Chuck if they wish. Specifically for this proposed field work, it is highly recommended that Bob and/or Anchor contact Chuck to understand his concerns with regard to grain size distributions and model calibrations. Other issues may be less time critical but should certainly be ironed out in the near future so that TCEQ's competent person in these matters has a good conceptual understanding of where the project is and where it is heading with respect to the hydrodynamic and sediment transport studies.

Joe
